Gas and Diesel Caddys

The Gas and Diesel Caddys meet U.N. and D.O.T. specifications when used according to Todd's instructions for transporting fuel. The Gas Caddy is red and the Diesel Caddy is yellow. All Caddys bear the UN Marking, "UN3H1W". U.S. Patent #5667113

Gas and Diesel Caddys hold 28 Gallons of fuel and meet D.O.T. requirements. Features include 10 Feet (305cm) of U.L. approved hose with static wire, molded hose brackets, U.L. approved, spring loaded nozzle, 3/4" U.L. approved ball valve, aluminum non sparking axle, pneumatic tires with nylon bearings, nylon wheel hubs, vented cap and a molded-in baffle for strength & durability. Optional pump kit is available to transfer fuel easily above the height of the caddy.

Waste Caddy

A portable waste removal system that holds 28 gallons of waste and can be rolled to a dump station. Features pneumatic non-sparking tires, vented cap, 10 Feet (305cm) of large diameter intake hose, 3" slide valve for evacuation, molded-in baffle for strength, molded hose holders and a hand operated manual pump. Intake hose fitting has proper threads to attach to standard deck fittings (1 1/2" or 1 1/4") and a quick disconnect fitting with a shut-off valve to control flow and eliminate spillage.

Part #: P93-2402

|------------|---------|---------|-----|
| | 22 1/2" | 27 1/2" | 41" |

Evacuation Kit: 93-2402P
 Allows evacuation to a container
 higher than the Caddy.

P93-2402

Easy and simple to use, fast and efficient. Easy to clean out after use. Better to be on level ground when full or know how to tack when going uphill. Have used it 5yrs. now without a problem. For me it has been a lifesaver because our marina can never seem to keep the large pump out in working condition. This is a great alternative and emergency system.
